

## **Invitation to greenSME Online-Workshop-miniseries: Developing a roadmap towards a European Sustainable Manufacturing Ecosystem until 2035**

As part of the project greenSME, we invite you to an online-workshop-miniseries, in order to elaborate a **roadmap towards a well-functioning European sustainable manufacturing ecosystem**. Significant work is being performed in building a digital and green ecosystem in Europe. However, there is not a fully functional EU sustainable manufacturing ecosystem, but rather partial high impact business and research networks and initiatives, on the regional, interregional, national and European levels.

We want to present to you the result of the research carried out at greenSME about trends, stakeholders and sustainable manufacturing solutions and on this basis discuss with you:

- overall vision of a Europe-wide sustainable manufacturing ecosystem, that focuses on SMEs in the sector and enables all key stakeholders to benefit from collaboration

and in a second workshop

- define concrete measures in the most important areas of action
- set out a foundation for finding a sector-wide common pathway towards a EUSME in a certain timeframe

The final aim is to develop concrete policy recommendations and a pathway for the sector itself of how to become more resilience and sustainable.

### **1<sup>st</sup> Workshop: The vision of an effective and efficient European Sustainable Manufacturing Ecosystem in 2035**

Duration: 2 hours

Date and time: Wednesday, 11.09.2024, 14.00-16.00 Central European Time

### **2<sup>nd</sup> Workshop: The way to the European Sustainable Manufacturing Ecosystem 2035**

Duration: 3 hours

Date and time: Wednesday, 30.10.2024, 13.00-16.00 Central European Time

**Registration:** Write short e-mail to [clara.behrend@tu-dortmund.de](mailto:clara.behrend@tu-dortmund.de) with subject matter “registration greenSME Roadmapping Workshop”

GreenSME is a project within the European funding programme HORIZON Europe, which primarily supports manufacturing SMEs in adopting advanced technologies and non-technological solutions to become more environmentally and socially sustainable while remaining competitive. It administers an online hub for the exchange of knowledge between stakeholders interested in sustainable manufacturing and for match-making between technology and service providers and manufacturing SMEs.
